RESEARCH EXPERIENCE **Amazon Inc - Search M5 Team** Jun 2024 - Sep 2024
Applied Scientist Intern, Advisors: Xiaohu Xie and Alejandro Mottini
Improving Instruction-following Capability of Multi-modal Embedding Models

- Developed a multi-modal, decoder-only framework for learning representations with instruction-following capabilities.
- Designed and implemented a two-stage training approach: a pre-training phase for modality alignment, followed by instruction fine-tuning.

- Our method achieved SoTA performance on multi-modal information retrieval benchmarks. (In submission to CVPR 2025).

Aligning Large Language Models via Fine-grained Supervision and Token-level RLHF
(Paper published in ACL 2024)

- Developed a fine-grained data collection method for reward training via minimal editing, which pinpoints the exact output segments that affect user choices.
- Proposed token-level RLHF by training a token-level reward model with fine-grained supervision and incorporated it into PPO training.
- Our method outperformed LLaMA2-chat-7B and achieved the best performance on AlpacaFarm among all 7B models.

Latent-Thought Language Models

- Proposed a novel family of language models: Latent-Thought Language Models (LTMs) – abstract tokens that *guide* the autoregressive generation of ground tokens through a Transformer decoder.
- Dual-rate optimization framework: fast learning of local variational parameters for the posterior latent tokens, and slow learning of global decoder parameters.
- Given equivalent inference budgets, LTMs demonstrate superior sample efficiency compared to conventional autoregressive models and diffusion models.

KokoMind: A Multifaceted Evaluation Dataset of Social Interactions

- Developed an evaluation dataset containing 150 complex multi-party social interactions with free-text questions and answers generated by GPT-4.
- For each social interaction, we ask various questions designed to assess multiple dimensions including Theory of Mind, social norms, emotion recognition, etc.
